From one of today's most respected diet and nutrition experts: a 14-day weight loss plan designed to help you change your shape for life using a new breakthrough personalized protein prescription that has worked for thousands of his patients. Dr. David Heber's groundbreaking book *What Color Is Your Diet?* introduced us to the Color Code—building a healthy diet based on colorful fruits and vegetables. His new book, *The LA Shape Diet*, combines the sound nutritional basis of the Color Code with his newest research from the UCLA Center for Nutrition, which shows you how to analyse your body shape, personal protein needs, and metabolism and not

only lose weight—but also change your body shape. This has major appeal to the millions of Americans who may be able to lose weight but are still dissatisfied with the look of their bodies—and end up gaining the weight back anyway. Dr. Heber maintains that everyone is born with a particular shape and that this shape makes a huge difference in how you should approach weight loss. Dr. Heber teaches the difference between the shape you can change and the shape you cannot, and how to do this with the right amount of dietary protein. Based on over 3500 measurements made by his researchers at UCLA, Dr. Heber has come up with tables that estimate how much protein you need in your diet at a given height and weight, and how many calories you should consume every day. Then Dr. Heber helps you build your own ideal diet, starting with protein, then 7 colorful servings of fruits and vegetables (providing

25 grams of filling fiber), and finally whole grains. Dr. Heber explains not only glycemic index (how fast blood sugar goes up) but glycemic load (glycemic index + how much carbohydrate a food provides), which determines how a particular food affects the overall diet. He groups foods into four tables to make it easy for readers to navigate their dinner table. In a world of dietary fads and "one size fits all" pseudo-miracle diets, The LA Shape Diet is the most effective, easy-to-follow, scientifically sound dietary plan you'll find.

This book contains the necessary knowledge and tools to incorporate nutrition into primary care practice. As a practical matter, this effort is led by a dedicated primary care physician with the help of motivated registered dietitians, nurses, psychologists, physical therapists, and office staff whether within a known practice or by referral to the community. It is essential that the nutrition prescription provided by the physician be as efficient as possible. While many team members have superior knowledge in the areas of nutrition, exercise, and psychology, the health practitioner remains the focus of patient confidence in a therapy plan. Therefore, the endorsement of the plan rather than the implementation of the plan is the most important task of the physician. This book proposes a significant change in attitude of primary health care providers in

terms of the power of nutrition in prevention and treatment of common disease. It features detailed and referenced information on the role of nutrition in the most common conditions encountered in primary care practice. In the past, treatment focused primarily on drugs and surgery for the treatment of disease with nutrition as an afterthought. Advanced technologies and drugs are effective for the treatment of acute disease, but many of the most common diseases such as heart disease, diabetes, and cancer are not preventable with drugs and surgery. While there is mention of prevention of heart disease, this largely relates to the use of statins with some modest discussion of a healthy diet. Similarly, prevention of type 2 diabetes is the early introduction of metformin or intensive insulin therapy.
