This book is well written, concise, and easy to read and understand. It serves as a very handy and useful resource for busy laboratorians, who routinely encounter the situations detailed therein. It is also helpful for students, who need to learn how to recognize and avoid such situations, by providing expert guidance and examples of ways to keep these types of errors from potentially causing harm to patients.--Cynthia S. Johns, Laboratory Corporation of America, Lab Medicine The Diagnostic Standards of Care series presents common errors associated with diagnoses in clinical pathology, using case examples to illustrate effective analysis based on current evidence and standards. Each volume demonstrates the use of quality assurance and the role of the pathologist in ensuring quality and patient safety. Hematology and Immunology focuses on core issues in achieving quality in all areas of hematopathology and immunology, with an emphasis on identifying established, evidence-based standards. It addresses potential problems and sources of error in testing procedures, how to anticipate and avoid such problems, and how to manage them if they occur. Discussions are problem-based and address common situations and issues faced by clinical pathologists or members of a laboratory team. Using actual case studies, the book provides plentiful examples of errors, along with discussions on how to deal with them effectively. Hematology and Immunology Features Key issues in achieving quality in all areas of hematology and immunology Numerous case examples offering real-world illustrations of how problems occur and how to avoid them An emphasis on identifying established, evidence-based standards in hematology and immunology

Now in its third edition, this essential handbook for nurses and allied health professionals gives clear, simple explanations of blood results, focusing on routinely requested investigations. There have been many changes since the second edition - from alterations in units (such as g/L for haemoglobin, rather than g/dL) to the merging of haematology with biochemistry, blood transfusion and immunology to form blood science. Accordingly, in this new edition there are more details of immunology, immunological diseases, and the blood tests involved. These changes reflect the new roles which nurses,
